

Conlett New Generation Silicone Adhesive Tape: Sil-Fixx, is a very special technology incorporating the silicone into the PU base tape.

It is highly permeable and conforming to the skin.

Characteristics:

- Soft and pliable, it will not damage and disrupt any skin layers
- Patent design allows tearing the desired length without compromising the tape strength
- Excellent adhesive property, waterproof, higher skin adhesive power - the corners don't peel off once applied when immersed in water as compared to existing paper blended/non-woven based silicone tape
- Higher conforming property due to PU backing as compared to existing tapes
- Sil-Fixx can be reapplied without losing the adhesiveness, no hair removal, no residue

Applications:

- Very sensitive skin: Neonates and Geriatric patients. Suitable on damaged skin such as Dialysis, Chemotherapy and Radiography patients, thanks to its gentle and non-stripping properties
- All types of fixation e.g. IV, Cannula, tubes, electrodes etc.
- Use as skin protection to prevent sores
